

Zip Code Database (v1.0)

This database is provided free to anyone who wants it with the request that anyone who benefits from it please drop me a quick email and let me know how you're using it. Also, if you wish to contribute to this project or improve upon the database that is also welcome.

Notes: Almost all ZIP codes have lon/lat values associated with them but some ZIP codes do not. Most of these are military zip codes but there are some others. If you find an entry that doesn't have a long/lat and you happen to know the correct info please let me know. Please also be sure to report any errors or suspected errors with the data and I'll check into it.

September 6th, 2001 - Please note that the following zip codes are not in the database: 08100, 08400, 14600, 23500, 23600, and 31900. As far as I know these are valid zip codes but I am unsure of the correct information for them. I was also unable to confirm the information with the USPS website. The USPS website does show a city and state but it indicates that the city mentioned is "NOT ACCEPTABLE". Unfortunately it does NOT state what is acceptable so rather than include the zip codes with possible erroneous data I have opted not to add them at all until I can find accurate information.

Database Fields: ZIP, LATITUDE, LONGITUDE, CITY, STATE, COUNTY, ZIP_CLASS
